

TOKUSHIMA

(Trial)

Tokushima Health and Medicine Cluster

Outline of the Project

This proposal calls for the establishment of a base for the creation of intellectual industries in the field of health and medicine, with academia, industry, and government collaborated, by utilizing The University of Tokushima, which is already pursuing innovative research in life sciences and nanotechnology, as a core center. Additionally, through the activities of supporting the foundation and growth of new venture companies, as well as developments of new businesses by existing companies, another goal is to nurture companies and industries that possess the technology and creativity needed to compete in the global market successfully.
