

Readings of Environmental Radiation Monitoring in Fukushima Prefecture (Urban Parks, etc.)

July 13, 2011

Disaster Provision Main Office of Fukushima Pref. (Nuclear Power Team)

1. Monitoring date

Monday, July 11, 2011

2. Monitored facility

Park for which restrictions on use have been requested because the air dose rates exceeded the government's standard value (3.8  $\mu\text{Sv/h}$ ) in the previous survey (June 16 to 22), and which is subject to continuous survey

One park (Shinzan Cemetery (Fukushima City))

3. Monitoring results

As a result of the continuous survey, the air dose rates were measured below the government's provisional standard value at all of the five points monitored, and the average of the five points was also below that value.

Municipality	Category	Name of the urban park, etc.	Monitoring date	Measuring height	Air dose rate readings					Remarks	
					Average value of each of the five spots (four corners and center)						Average value of the five spots
					(1) Center	(2)	(3)	(4)	(5)		
Fukushima City	Cemetery	Shinzan Cemetery	July 11	50 cm	1.5	3.0	2.5	2.6	2.7	2.5	

4. Measures to be taken, etc.

Since the air dose rates were measured below the government's provisional standard value at all of the five monitoring points in the monitoring of Shinzan Cemetery, an additional monitoring survey will be implemented roughly within a week. If the rates at all of the monitoring points remain below the standard value in the next survey, a request will be made to lift the restrictions on use.
